Country: Turkey
USA

College: Trakya University
University of California Berkeley

Specialization : Data Science

Problem Description

ABC is a pharmaceutical company that wants to understand the persistency of a drug as per the physician's prescription for a patient. This company has approached an Analytics company to automate this process of identification. This report summarizes how our team came up with a solution to automate the persistency of a drug for the client ABC.

Machine Learning Problem

With an objective to gather insights on the factors that are impacting the persistency, then build a classification model to train, test, validate, and predict based on the given dataset.

Business Understanding

The pharma company ABC wants to understand about the persistency of a drug for a patient. There are lots of Non-Tuberculous Mycobacterial (NTM) infection data. ABC company wants to know whether the drug's effects on a patient are persistent given the prescription data. Based on the persistency count from the dataset, our team from Data Glacier will analyze, model, and predict drug persistency. Then the ABC company can make strategic production decisions on such drug to maximize its revenue.

Dataset

Bucket	Variable	Variable Description
Unique Row Id	Patient ID	Unique ID of each patient
Target Variable	Persistency_Flag	Flag indicating if a patient was persistent or not
Demographics	Age	Age of the patient during their therapy
	Race	Race of the patient from the patient table
	Region	Region of the patient from the patient table
	Ethnicity	Ethnicity of the patient from the patient table
	Gender	Gender of the patient from the patient table
Provider Attributes	IDN Indicator	Flag indicating patients mapped to IDN
	NTM - Physician Specialty	Specialty of the HCP that prescribed the NTM Rx
	NTM - T-Score	T Score of the patient at the time of the NTM Rx (within 2 years prior from rxdate)
	Change in T Score	Change in Tscore before starting with any therapy and after receiving therapy (Worsened, Remained Same, Improved, Unknown)
	NTM - Risk Segment	Risk Segment of the patient at the time of the NTM Rx (within 2 years days prior from rxdate)
Clinical Factors	Change in Risk Segment	Change in Risk Segment before starting with any therapy and after receiving therapy (Worsened, Remained Same, Improved, Unknown)
	NTM - Multiple Risk Factors	Flag indicating if patient falls under multiple risk category (having more than 1 risk) at the time of the NTM Rx (within 365 days prior from rxdate)
	NTM - Dexa Scan Frequency	Number of DEXA scans taken prior to the first NTM Rx date (within 365 days prior from rxdate)
	NTM - Dexa Scan Recency	Flag indicating the presence of Dexa Scan before the NTM Rx (within 2 years prior from rxdate or between their first Rx and Switched Rx; whichever is smaller and applicable)
	Dexa During Therapy	Flag indicating if the patient had a Dexa Scan during their first continuous therapy
	NTM - Fragility Fracture Recency	Flag indicating if the patient had a recent fragility fracture (within 365 days prior from rxdate)
	Fragility Fracture During Therapy	Flag indicating if the patient had fragility fracture during their first continuous therapy
	NTM - Glucocorticoid Recency	Flag indicating usage of Glucocorticoids (>=7.5mg strength) in the one year look-back from the first NTM Rx
	Glucocorticoid Usage During Therapy	Flag indicating if the patient had a Glucocorticoid usage during the first continuous therapy
	NTM - Injectable Experience	Flag indicating any injectable drug usage in the recent 12 months before the NTM OP Rx
Disease/Treatment Factor	NTM - Risk Factors	Risk Factors that the patient is falling into. For chronic Risk Factors complete lookback to be applied and for non-chronic Risk Factors, one year lookback from the date of first OP Rx
	NTM - Comorbidity	Comorbidities are divided into two main categories - Acute and chronic, based on the ICD codes. For chronic disease we are taking complete look back from the first Rx date of NTM therapy and for acute diseases, time period before the NTM OP Rx with one year lookback has been applied
	NTM - Concomitancy	Concomitant drugs recorded prior to starting with a therapy(within 365 days prior from first rxdate)
	Adherence	Adherence for the therapies

Project Lifecycle

Weeks	Deadline	Plan
Week 07	Aug 04, 2022	Problem statement and Introduction
Week 08	Aug 11, 2022	Data preprocessing
Week 09	Aug 18, 2022	Feature Extraction
Week 10	Aug 25 2022	Building the Model
Week 11	Sep 01, 2022	Model Result Evaluation
Week 12	Sep 08, 2022	Flask Development + Heroku
Week 13	Sep 15, 2022	Final Report - Code Presentation

Data Intake Report

Data Intake Report

Name: Healthcare - Persistency of a drug

Report date : 04.08.2022

Internship Batch: LISUM11

Version: 1.0

Data scientist name: Emre Korkusuz – Yanjun Lin

Healthcare_dataset.csv details:

Total number of observations	3424
Total number of files	1
Total number of features	69
Base format of the file	csv
Size of the data	892 KB

Healthcare_dataset.xlsx details:

Total number of observations	58
Total number of files	1
Total number of features	3
Base format of the file	xlsx
Size of the data	904 KB

Data Understanding

The Healthcare Dataset includes 69 columns and 3424 rows of observations. The target variable is Persistency_Flag with Boolean type of True or False. After displaying the data, it shows that there are 2 columns data of Integer type and the rest columns are either Boolean or String data type.
